

### VINWAX – Sterile Bone Wax

Bone Wax is a mixture of beeswax, paraffin, and isopropyl palmitate, a wax-softening agent. It has a waxy odour and is opaque. It's intended for use in surgical operations to stop bleeding from bone surfaces.

It works as a mechanical (tamponade) barrier to maintain local haemostasis in th bone. It is non-absorbable and has no biological action. Individual foil packets containing 2.5 g are provided sterile and wrapped in individually sealed over wraps. Surgical wax is sterilized by Gamma radiation.

To avoid the risk of contamination and excessive drying, packets should be opened right before use and utilised right away. Surgical Wax should not be re-sterilized or exposed to high temperature.

### Additional Information

Material	:	Beeswax, Paraffin & Isopropyl Palmitate
Color	:	Opaque
Absorption	:	Minimally Resorbable
Sterilization	:	Gamma Radiation
Shelf Life	:	5 Years
Product Characteristics	:	It acts as a mechanical barrier to aid local haemostasis and is biochemically inert.
Packaging	:	In an aluminum foil packages

Code No.

VW 810

DESCRIPTION

Sterilised Bonewax 2.5g
